

K-SOL NP (MAP) 12-61

PROMOTES RHIZOGENESIS

SUPPORTS THE CROP IN POST-TRANSPLANTING AND VEGETATIVE RESTART STAGES

The K-SOL LINE consists of a wide range of highly soluble fertilizers with a large variety of macronutrients ratios, to best meet individual crop requirements and production expectations. The microelements, present in a totally chelated form, help prevent and treat any physiological plant disorder associated to their deficiency. The K-SOL LINE is suitable for any fertigation system.

K-SOL NP (MAP) 12-61 is a fertilizer of maximum purity with a high content of phosphorus and nitrogen, ideal for soils which tend to be alkaline, subject to chlorosis and with high-pH problems. K-SOL NP (MAP) 12-61 is recommended at the beginning of vegetative development, when the plant requires high amounts of phosphorus to promote the growth of the root system, and to stimulate flowering.

CROP	TIME OF APPLICATION	DOSE/HECTARE*
All crops	Post-transplanting and Pre-flowering phase	25-50 kg

COMPOSITION	
Total nitrogen (N)	12.00%
Ammoniacal nitrogen (N)	12.00%
Phosphoric anhydride (P ₂ O ₅) soluble in water	61.00%
Phosphoric anhydride (P ₂ O ₅) soluble in neutral ammonium citrate and in water	61.00%

PHYSICO-CHEMICAL FEATURES	
SOLUBLE POWDER	
pH (sol 1%)	4.8
Conductivity E.C. µS/cm (1‰)	905
METHOD OF USE	
Three blue water droplets with a red minus sign above them, indicating fertigation.	
Fertigation	

PACKAGING: 25 KG - PALLET 1500 KG

The choice of the dose is subordinated to various factors and can be varied when necessary. All applications can be repeated in relation to the different crop needs. You can contact our Technical Service for the correct application on specific soils and under specific climate conditions.
