

K-SOL (NK) 13-46 B.T.C.

PROMOTES RIPENING

The K-SOL LINE consists of a wide range of highly soluble fertilizers with a large variety of macronutrients ratios, to best meet individual crop requirements and production expectations. The microelements, present in a totally chelated form, help prevent and treat any physiological plant disorder associated to their deficiency. The K-SOL LINE is suitable for any fertigation system.

K-SOL (NK) 13-46 B.T.C. it is a highly soluble fertilizer, characterized by high purity. The use of K-SOL (NK) 13-46 B.T.C. allows a significant improvement of quantitative and qualitative production parameters. In fact it increases sugar content, mechanical resistance to manipulation and pathogens, and promotes a greater accumulation of plant reserves. It also optimizes root absorption of potassium and nitric nitrogen, minimizing losses due to leaching. K-SOL (NK) 13-46 B.T.C. is perfectly suited for use with all fertigation systems as well as for foliar application. The product can be mixed with other water-soluble fertilizers, although single use is recommended when used at high concentrations.

CROP	TIME OF APPLICATION	DOSE/HECTARE*
All crops	Ripening inducer	25-50 kg

COMPOSITION		PHYSICO-CHEMICAL FEATURES	
Total nitrogen (N)	13.00%	SOLUBLE POWDER	
Nitric nitrogen (N)	13.00%	pH (sol 1%)	4,5
Potassium oxide (K ₂ O) soluble in water	46.00%	Conductivity E.C. µS/cm (1‰)	1425
Chlorine (Cl) max	2.00%	METHOD OF USE	Three blue water droplets with a horizontal line through them, indicating fertigation.
			Fertigation

PACKAGING: 25 KG - PALLET 1500 KG

The choice of the dose is subordinated to various factors and can be varied when necessary. All applications can be repeated in relation to the different crop needs. You can contact our Technical Service for the correct application on specific soils and under specific climate conditions.
