K-SOL (MKP) 52-34

PROMOTES FRUIT COLOR INCREASES TISSUE MECHANICAL RESISTANCE

The K-SOL LINE consists of a wide range of highly soluble fertilizers with a large variety of macronutrients ratios, to best meet individual crop requirements and production expectations. The microelements, present in a totally chelated form, help prevent and treat any physiological plant disorder associated to their deficiency. The K-SOL LINE is suitable for any fertigation system.

K-SOL (MKP) 52-34 is a fertilizer of maximum purity with a high concentration of phosphorus and potassium, readily assimilable by plants. K-SOL (MKP) 52-34 can fully provide for phosphorus and potassium crop requirements. It is recommended for applications at the early developmental stages, when the plant requires high amounts of phosphorus to promote the growth of the root system. When used at pre-flowering and post-fruit setting, it favors flower fertilization and improves fruit development. It can also be used at post-fruit setting, to reduce vegetative development and promote ripening. K-SOL (MKP) 52-34 can be mixed with other fertilizers to meet the nutritional crop requirements throughout the cycle. Avoid mixing the product in concentrated form with magnesium- and calcium-based fertilizers.

CROP	TIME OF APPLICATION		DOSE/HECTARE*		
All crops	Vegetative phase			25-50 kg	
COMPOSITION			PHYSICO-CHEMICAL FEATURES		
Phosphoric anhydride (P ₂ O ₅) soluble in water 52.00		52.00%	SOLUBLE POWDER		
Phosphoric anhydride (P_2O_5) soluble in neutral ammonium citrate and in water		52.00%	pH (sol 1%)		5.5
			Conductivity E.C. μS/cm (1‰)		830
Potassium oxide (K ₂ O) soluble in water 34.00%		34.00%			
		METHOD OF USE		-6.8.7-	
					Fertigation

PACKAGING: 25 KG - PALLET 1500 KG
